

AddUp FlexCare System™

COMPACT, SAFE AND READY-TO-USE PROTECTION SYSTEMS
FOR YOUR FORMUP 350® METAL ADDITIVE MACHINE

AddUp Flex Care System™

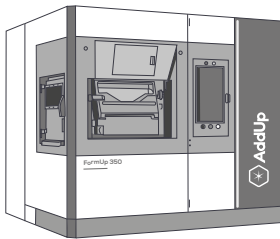

A modular solution for rapidly deploying and operating
AddUp's PBF machines (Powder Bed Fusion),
ensuring the highest level of safety.

AddUp FlexCare System™

Maximum safety for your operators

With AddUp FlexCare System™, your workshop becomes a true confined area suitable for the use of metal powders, even highly reactive.

The cells are equipped with a vacuum system to prevent any leakage of powder to the outside, and the quality of the ambient air is constantly monitored (filtration system, oxygen regulation and humidity regulation).

A plug and play solution

Using the principle of autonomous production cells, you create a confined area anywhere you want, avoiding heavy modifications to your building.

Each cell is designed to accommodate a FormUp 350® machine and all its peripherals: Autonomous Powder Module, platform loading table, washing machine.

Multiple configurations available

The AddUp FlexCare System™ solutions are modular by design, because they are based on sea containers that can be placed side by side according to the number of machines and the space you need. We can add the possibility to install the FlexCare indoor or outdoor.
